

I'm not robot!

1 week ago Jun 21, 2022 · The coordinates -1000, -1000 represent the top, left corner of the camera image, and coordinates 1000, 1000 represent the bottom, right corner of the camera image, as shown in the illustration below. Figure 1. The red lines illustrate the coordinate system for specifying a Camera.Area within a camera preview. Show details · See also: Image Does anybody know is it possible to open some personal picture when emulator camera starts? I have an application which is based on image analysis and I would like when I click a button for camera that camera opens not that default Android emulator moving image. I want it to open some image which I set as a default image. So when I choose to take a picture it will show only that image and when I take a take a picture, that image will be saved to gallery, not Android default image. Let's Solve it: This is a common error many developers questioned us about it. So we write the explanation above. You just have to apply the suggested solution to your code and it will do for you. If you still getting this error after applying this code then comment below we will get back to you with the new method. Solution 1 Under Tools > AVD Manager, select the "pencil" to get to "Virtual Device Configuration". Show Advanced Settings > Camera will give you the option of using emulated, or a device: Device - use host computer webcam or built-in camera If all you need is to get a still image into the camera, starting with Android Studio 3.2 you can put your static images into the virtual scene: as discussed in this entry from Android developers blog. Note that you'll need to move the camera position into the dining room to see your images (turn around and use Alt-w to move forward). Solution 2 Finally! Append to file ~/Android/Sdk/emulator/resources/Toren1BD-posters poster custom size 2 2 position 0 0 -1.8 rotation 0 0 0 default custom.png Place "custom.png" in ~/Android/Sdk/emulator/resources/ Restart! emulator @Phone -no-snapshot -no-boot-anim (replace "Phone" with the name of your avd! (see: emulator -list-avds) Profit! Now you have a texture just in front of camera-default-position. Solution 3 Update 2022 The best way use the OBS, this project creates a virtual webcam and you can play videos or show picture. Step 1: Download the OBS Studio from this site and create a virtual web-cam and add a video for plying that. Step 2: Changing the config in android.AVD, change front and back camera to webcam0. Solution 4 Download the source from following url . This is work as the another Gallery in the emulator. While passing intent to capture image from camera choose this gallery, this is looks like samsung mobile 3d gallery, this will return the default images. . in emulators . one more thing it will work fine after 3.0 versions only. Solution 5 It seems the only solution is to use a remote camera. This is one way to do it: It's not something what I was looking for but I think it can be used for testing. Maybe even barcode scanner would work with this if the barcode is placed properly in front of camera. Note: You are free to use these solutions for your personal use. We recommend you apply the first solution to your code because it was tested in our system before posting it on this page. We are always trying to help the developer community, So we made their work easy. Basically, we collected these data from stackoverflow.com, As it is licensed under cc by-sa 2.5, cc by-sa 3.0 and cc by-sa 4.0. I have been working in React Native mobile app development for one of my retail client where we have to implement the functionality for Barcode and QR code read the interesting thing is a testing part as I don't wanna use my physical device instead of Emulator.Cut the story short the one can follow steps from below article. it in a nutshell the emulator allow to use this with the help of augmented reality in which we have one virtual room with one table and a wall where we can upload our images and then use camera to perform operation on it.if we click ... in your emulator you will land to emulator controls where the one can go to camera and upload the image for wall or table and then they can use the controls to move the camera to move camera controls are defined in above article.... > Camera > upload images for wall or tableNote:- Remember the Wall and the Table where the one can upload the image is inside the room the one has to move camera inside the room with the help of controls defined in here. Does anybody know is it possible to open some personal picture when emulator camera starts? I have an application which is based on image analysis and I would like when I click a button for camera that camera opens not that default Android emulator moving image. I want it to open some image which I set as a default image. So when I choose to take a picture it will show only that image and when I take a take a picture, that image will be saved to gallery, not Android default image. In this codelab, you'll learn how to create a camera app that uses CameraX to show a viewfinder, take photos, capture video, and analyze an image stream from the camera. To achieve this, we will introduce the concept of use cases in CameraX, which you can use for a variety of camera operations, from displaying a viewfinder to capturing videos. Prerequisites Basic Android development experience. MediaStore knowledge is desirable but not required. What you'll do Learn how to add the CameraX dependencies. Learn how to display the camera preview in an activity. (Preview use case) Build an app that can take a photo and save it to storage. (ImageCapture use case) Learn how to analyze frames from the camera in real time. (ImageAnalysis use case) Learn how to capture video to MediaStore. (VideoCapture use case) What you'll need An Android device or Android Studio's emulator: Recommend Android 10 and above: MediaStore behavior depends on scoped storage availability. With Android Emulator**, we recommend using an Android Virtual Device (AVD) that is based on Android 11 or higher**. Note that CameraX only requires a minimum supported API level to be 21. Android Studio Arctic Fox 2020.3.1 or above. Understand of Kotlin and Android ViewBinding In Android Studio, create a new project, and select Empty Activity when prompted. Next, name the app "CameraXApp", and confirm or change the package name to be "com.android.example.cameraxapp". Choose Kotlin for the language, and set the minimum API level to 21 (which is the minimum required for CameraX). For older versions of Android Studio, be sure to include AndroidX artifacts support. Add the Gradle dependencies Open the build.gradle file for the CameraXApp.app module, and add the CameraX dependencies: dependencies { def camerax_version = "1.1.0-beta01" implementation "androidx.camera:camera-core:\${camerax_version}" implementation "androidx.camera:camera-camera-2.4({camerax_version})" implementation "androidx.camera:camera-lifecycle:\${camerax_version}" implementation "androidx.camera:camera-video:\${camerax_version}" implementation "androidx.camera:camera-view:\${camerax_version}" implementation "androidx.camera:camera-extensions:\${camerax_version}" } CameraX needs some methods that are part of Java 8, so we need to set our compile options accordingly. At the end of the android block, right after buildTypes, add the following: compileOptions { sourceCompatibility JavaVersion.VERSION_1_8 targetCompatibility JavaVersion.VERSION_1_8 } This codelab uses ViewBinding, so enable it with the following (at the end of the android{} block): buildFeatures { viewBinding true } When prompted, click Sync Now, and we will be ready to use CameraX in our app. Create the codelab layout In the UI for this codelab, we use the following: A CameraX PreviewView (to preview camera image/video). A standard button to control image capture. A standard button to start/stop video capture. A vertical guideline to position the 2 buttons. Let's replace the default layout with this code to: Open the activity_main layout file at res/layout/activity_main.xml, and replace it with the following code.
